

SIDE EVENT WEDNESDAY 9 DECEMBER 15-16.30:

THE FIGHT AGAINST CLIMATE CHANGE STARTS AT HOME

Thermographic imaging is an effective tool for revealing the energy loss in buildings.

CLIMATE – ENERGY - JOBS – How do we harvest the huge potential in energy wasting buildings?

A targeted effort to dramatically improve the energy efficiency in our buildings is the most efficient way to save energy and combat climate changes. Join Climate Consortium Denmark's side event and see how more energy efficient buildings also can reduce our dependency on fossil fuels – and create thousands of jobs.

15.00-16.30:
Wednesday 9 December
Centre Hall of the Bella Center

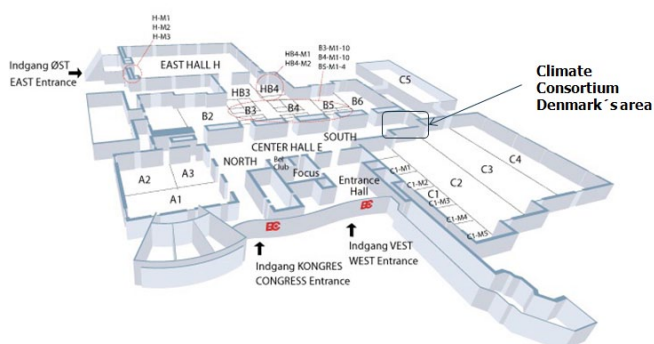

The speakers:

Eelco van Heel, board member, European Insulation Manufacturers' Association (EURIMA), CEO of the Rockwool Group:
The invisible potential in buildings

Jens Laustsen, Senior energy policy analyst (buildings), the International Energy Agency (IEA):
How do we save 75% of the energy used in buildings

Kim Carstensen, Leader, WWF's Global Climate Initiative:
Best policies to assure CO₂ reductions
